Lemi Gobena

Full-Stack Software Engineer

lemigobena12@gmail.com | +251 939 740 755
Addis Ababa, Ethiopia | github.com/lemigobena

Versatile Software Engineer with a proven track record of delivering end-to-end digital solutions that prioritize technical efficiency and user-centric design. Deeply committed to engineering excellence, I focus on building high-performance systems and exploring the frontiers of ML-integrated applications. Leveraging a distinct background in analytical mathematics, I aim to create impactful technology that transforms complex administrative challenges into streamlined digital experiences.

EDUCATION

Addis Ababa University
BSc in Software Engineering

Estimated 2028

National Achievement
Top 10 National Scorer in ESSLCE (Ethiopian School Leaving Certificate Examination)

2023

Self-Directed Study
Completed 25+ advanced projects in Full-Stack, Systems, and AI/ML.

SKILLS

PROGRAMMING
JavaScript, Java, Python, C++
SQL, HTML5, CSS3

FRAMEWORKS
React, Node.js, Next.js
Express, React Native
Prisma, Tailwind CSS

CORE CONCEPTS
System Architecture
Full-Stack Development
ML / Generative AI
Relational Databases

TOOLS
Git, Firebase, Supabase
Expo, MS Access

LANGUAGES

English: Professional Proficiency
Amharic/Oromo: Native

WORK EXPERIENCE

Freelance Full-Stack Developer — *Independent Projects*

2021 – Present | Addis Ababa, Ethiopia

- Successfully architected and deployed over 50 projects for local clients and administrative institutions.
- Specialized in end-to-end solutions, from responsive UI designs to scalable backend systems.
- Integrated third-party services like Firebase, Supabase, and Gemini API for advanced functionality.
- Optimized system performance for data-heavy applications using PostgreSQL and custom caching.

System Developer (Early Works) — *Institutional Digitization*

2019 – 2021 | High School Projects

- Developed a school website to centralize academic resources and news for staff and students.
- Built a relational database system to digitize student records and streamline administrative processes.
- Created a functional excavator prototype showcased in regional school exhibitions.

FEATURED PROJECTS

HealthNet (Full-Stack)

Integrated Hospital & Patient Management System.

- Engineered a system centralizing medical records, doctor scheduling, and admin dashboards using React and Node.js.
- Developed a mobile application companion with Expo and Supabase for real-time patient alerts.
- Automated administrative reporting, reducing paperwork time by approximately 40%.

GuardianNet (Safety)

Real-time Safety & Security Monitoring Platform.

- Developed a localized SOS alert system with real-time location tracking using Next.js and Firebase.
- Designed a high-performance dashboard for security managers to track incident reports instantenously.
- Implemented secure authentication and SOS triggers for mobile users via React Native.

MyStudy AI (AI/ML)

Personalized AI Study Assistant.

- Built an AI-driven platform using Gemini API/LLMs to organize study materials and generate interactive quizzes.
- Implemented vector-based search for study resources and local inference for quick material summarization.
- Enhanced student focus and organization through structured revision paths.

"Dedicated to building impactful digital solutions that bridge the gap between technical complexity and user-centric design."
